PROFESSIONAL SUMMARY

Senior Front-End Engineer with 5+ years of experience specializing in large-scale OTA platforms, real-time system engineering, and multi-tenant white-label architecture. Currently leading front-end development at GoToSafar, building production-grade booking systems serving complex multi-service travel flows. Expert in React.js, Next.js, TypeScript, and Redux Toolkit, with a track record of delivering high-performance, WebSocket-driven trading interfaces and API-integrated booking experiences across travel, fintech, and crypto verticals.

PROFESSIONAL EXPERIENCE

Senior Front-End Engineer | Ipek Yolu Araz (GoToSafar)

Full-time Onsite "Tabriz, Iran" | May 2023 - Present (Current Role)

- Led front-end architecture across GoToSafar's full OTA ecosystem — main booking platform, admin panel, GoToCruise, and white-label deployments — as the sole engineer on the core product team.
- Engineered multi-service booking flows (flights, hotels, cruises, residences, car rental, transfers, tours, visa) with structured third-party supplier API integration and complex data mapping.
- Built a scalable white-label system spanning multiple partner agencies, each running independent branded platforms from a single shared front-end core.
- Developed a fully-featured admin panel covering reservations, financials, user management, content, and white-label configuration.
- Drove Core Web Vitals improvements across high-traffic booking flows through bundle optimization, rendering strategy, and performance-first architecture.
- Implemented a robust localization system using i18next with URL-first locale detection, cookie fallback, and stable multi-tenant language flow.

Tech: React.js, Next.js, Tailwind CSS, Bootstrap, Redux Toolkit, i18n, TypeScript, Axios, PWA, Performance Optimization, GA4 ecommerce tracking

Front-End Developer | Negin Fannavaran Arta

Part-time Remote "Iran" | October 2022 - January 2024

- Developed front-end interfaces across a diverse portfolio spanning fintech, real-time gold trading, cryptocurrency, AI, and security consulting products.
- Built real-time trading dashboards and crypto payment UIs with live data feeds, complex state handling, and blockchain wallet integrations (Tron, Utopia).
- Delivered full front-end builds for memorial websites, company profiles, and internal platforms, owning the entire UI lifecycle from architecture to deployment.
- Contributed to Telim, a personal AI platform with per-user private spaces for data, memories, and contextual assistance, handling dynamic user-driven UI patterns.
- Worked within a 6-engineer cross-functional team across fintech, automation, and AI vision products while maintaining a strong hands-on development focus.

Tech: React.js, Next.js, TypeScript, Axios, WebSocket, PWA, Performance Optimization

SKILLS

Core:

- React.js
- Next.js
- TypeScript
- JavaScript
- Redux Toolkit
- Tailwind CSS
- Sass
- Bootstrap

APIs & Real-Time:

- REST
- GraphQL
- WebSocket
- Axios

Rendering & Performance:

- SSR
- SSG
- PWA
- Core Web Vitals
- Bundle Optimization

Tooling & Other:

- Git
- i18n
- GA4
- Python (familiar)
- Linux (familiar)

Front-End Developer | Mahan Pardakht Asia

Full-time Hybrid “Tabriz, Iran” | July 2021 - September 2022

- Built the front-end of an OTC cryptocurrency exchange platform from scratch, covering trading interfaces, wallet dashboards, and user account flows.
- Implemented real-time price feeds and WebSocket-driven updates across trading views, supporting 200+ coins and tokens.
- Developed front-end flows for KYC onboarding with live video capture and basic alerting interfaces for fraud and suspicious-activity events.
- Worked on blockchain-related UI flows including wallet operations and transaction tracking for Bitcoin, Ethereum, and Fantom networks.
- Contributed to ongoing product improvements based on user feedback, supporting platform growth to 16K+ registered users and ~300 daily active users.

Tech: React.js, Next.js, TypeScript, Axios, WebSocket, PWA, Performance Optimization

Front-End Developer (Contract) | Web Negah

Contract “Tehran, Iran” | November 2022 – February 2023

- Architected and built the entire front-end of Asan Tahator from scratch as the sole front-end developer, using Next.js, GraphQL, Redux, and Sass.
- Delivered a fully responsive, pixel-perfect UI across device sizes with a strong focus on performance, code structure, and maintainability.

Tech: Next.js, GraphQL, Redux Toolkit, Sass

EDUCATION

Bachelor of Computer Engineering

University of Tabriz | Tabriz, Iran

Relevant coursework:

- Data Structures
- Algorithms
- Software Engineering
- Computer Networks

SELECTED PROJECTS

- **GoToSafar:** Full-scale OTA platform covering flights, hotels, cruises, car rental, transfers, tours, and visa services with multi-language and multi-currency support.
- **GoToCruise:** Cruise tour booking platform with real-time availability, multi-language support, and end-to-end booking flows.
- **GTS White-Label:** Multi-tenant white-label OTA system enabling partner agencies to run independent branded booking experiences from a shared front-end core.
- **Cross-Device SMS Management Platform:** Built a full-stack cross-device SMS management platform with a Next.js web dashboard, Fastify backend, Android SMS gateway, and Telegram bot to manage Android SMS from web, iOS, and Telegram.
- **Personal Portfolio:** Developed a SEO-ready Next.js portfolio with TypeScript, Tailwind CSS, Motion animations, responsive UI, and polished personal branding.
- **IRExchanger:** OTC cryptocurrency exchange supporting 200+ coins with real-time rates, buy/sell flows, and blockchain wallet integrations.
- **Telim:** Multi-purpose platform spanning fintech, gold trading, cryptocurrency, and AI-driven personal assistance with per-user private data spaces.
- **TripGate:** Booking platform for US embassy appointment scheduling and visa application services with a streamlined user-focused interface.
- **Asan Tahator:** E-commerce platform built from scratch as sole front-end developer with modern architecture and fully responsive UI.

SELECTED WORK HIGHLIGHTS

- **Travel Booking Search Engine:** Built multi-service search flows covering location, date, passenger, and country selection with structured API integration and supplier mapping.
- **Localization Architecture:** Engineered a locale strategy in Next.js using i18next with URL-first detection, cookie fallback, and stable default-language flow across multi-tenant deployments.
- **White-Label Platform System:** Architected a front-end core powering multiple branded OTA platforms with isolated themes and content from a single shared codebase.
- **Real-Time Trading Interfaces:** Built live trading dashboards with WebSocket-driven price feeds, blockchain wallet flows, and high-frequency update handling across crypto and gold trading products.
